Agenda

What does „testing“ mean?

Could testing be useful in the context of FEWS?

Onboard means of testing within FEWS

Extended test environment

Summary

What does „testing“ mean?

The aim:

Ensure that executing a function in a given, known initial situation always yields the expected result.

Could testing be useful in the context of FEWS?

- Active / intentional changes to the configuration
 - Setup of a ModuleInstance / Workflow
 - Side effects from other changes
- Unintentional changes to the system
 - Update of operating system
 - Update of modelling software
- FEWS Update / Upgrade

Onboard means of testing within FEWS

WorkflowTestRun (XML configuration overview)

General definitions section

- List of directory definitions for later use in activities
- Set system time

List of activities

- Purge: purge a single file or set of files within a directory
- Copy: copy single file to given location
- Workflow
- Export time series (PI time series)
- Export logs: export log messages produced during last workflow run
- Set system time: set new system time
- Compare: compares two files (export files)
- Refresh: refresh datastore
- Contains: search text in text file
- Sleep

Onboard means of testing within FEWS

WorkflowTestRun, started within FEWS: <F12>

The image shows a screenshot of a software interface with a list of menu items on the left. An orange overlay is placed over the middle of the screen, containing text. Below the overlay, a file explorer window is visible, showing a directory structure with folders and files.

Menu items (left side):

- 1 open most recent current forecast and adjust system time
- 2 open most recent forecast and adjust system time
- 3 run
- 4 op
- 5 set
- 6 sav
- 7 ids
- 8 na
- 9 de
- A ve
- B cle
- C ru
- D res
- E rel
- F set
- G se
- H de
- I acknowledge all
- J open database viewer
- K open workflow navigator
- L open tabular config files display
- M start embedded vjdbbc server
- N terminate local runs
- O rollback modifier changes
- P database

Orange overlay text:

- + easy to use
- execution information is presented in the logging area & FEWS log
- + familiar way
- log can't be analysed at a glance
- works on the current localDatastore
- results may interfere with current results
- each WorkflowTestRun has to be called separately

File Explorer (bottom right):

- Computer
- Netzwerk
- ReportsTransfer
- temp
- Log4jConfig.xml
- Log4jConfig_.xml

File name:

Files of type: .xml (xml files)

Buttons: Open, Cancel

Onboard means of testing within FEWS

WorkflowTestRun, start via command line („from bin dir“)

- Needs a dedicated FEWS to be set up, main difference in corresponding INI file

```
main.class=nl.wldelft.fews.system.workflowtestrun.WorkflowTestRun
```

+ setting up a parallel data structure can reduce interference with working FEWS

+ WorkFlowTestRuns can be started via BAT files

+ additional preliminary work can be done (e.g. providing a localDatastore) because FEWS isn't running

- BAT programming is rather for specialists, adding tests might be difficult for normal users

- LOG files have to be analysed by the user

- test results still have to be prepared in advance

BCE

BJÖRNSÉN CONSULTING ENGINEERS

Extended test environment

Wish list

- Easy to use, results easy to analyse
- Executes several WorkflowTestRuns
- Simple configuration
- Simplifies set up a WorkflowTestRun
- Assistance for providing test data (localDatastore, results)

Extended test environment

General workflow

- Start logging
- Read configuration
- Safeguard FEWS directories (localDatastore, import, export, report,...)
- Loop through list of defined tests
 - Prepare initial situation (provide localDatastore, import data,...)
 - Execute WorkflowTestRun and retain log files
 - Check results (contents or at least existence)
 - Clean up
- Restore safeguarded directories

Additional mode to assist in setting up data

Extended test environment

WorkflowTestRun (reduced set of necessary elements)

General definitions section

- Reduced list of directory definitions for later use in activities
- Set system time

List of activities

- Purge: purge a single file or set of files within a directory
- Copy: copy single file to given location (only for special result files)
- Workflow
- Export time series (PI time series)
- Export logs: export log messages produced during last workflow run
- Set system time: set new system time
- Compare: compares two files (export files)
- Refresh: refresh datastore
- Contains: search text in text file (only for special log files)
- Sleep

Summary

Encouragement: proceed step by step

- Set up an environment that suits your needs
- Agree on general structure of tests
- Arrange for the tests to be regularly carried out
- Implement or work on a test as you create or work on a workflow

Provide quality for

- Your organisation's system
- Your customer's system

Demand quality from

- Your service provider

On the long run it'll pay!
