

# TVA Forecasting

---

Gabriel Miller

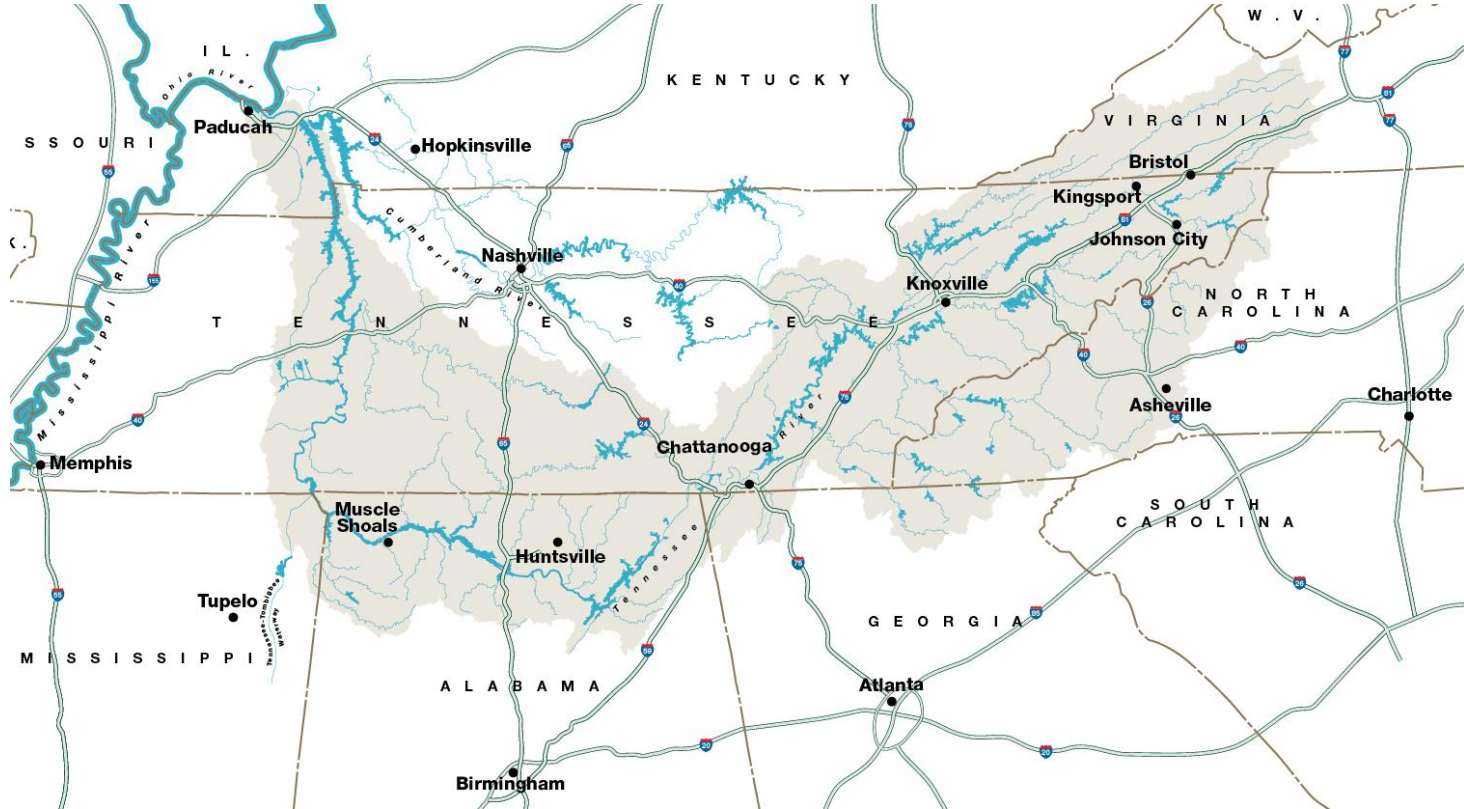

# What is TVA?

A power company  
and so much more...

# Tennessee Valley Watershed

# Integrated Tennessee River System

Navigation

Water Supply

Flood-Damage  
Reduction

Recreation

Power Generation

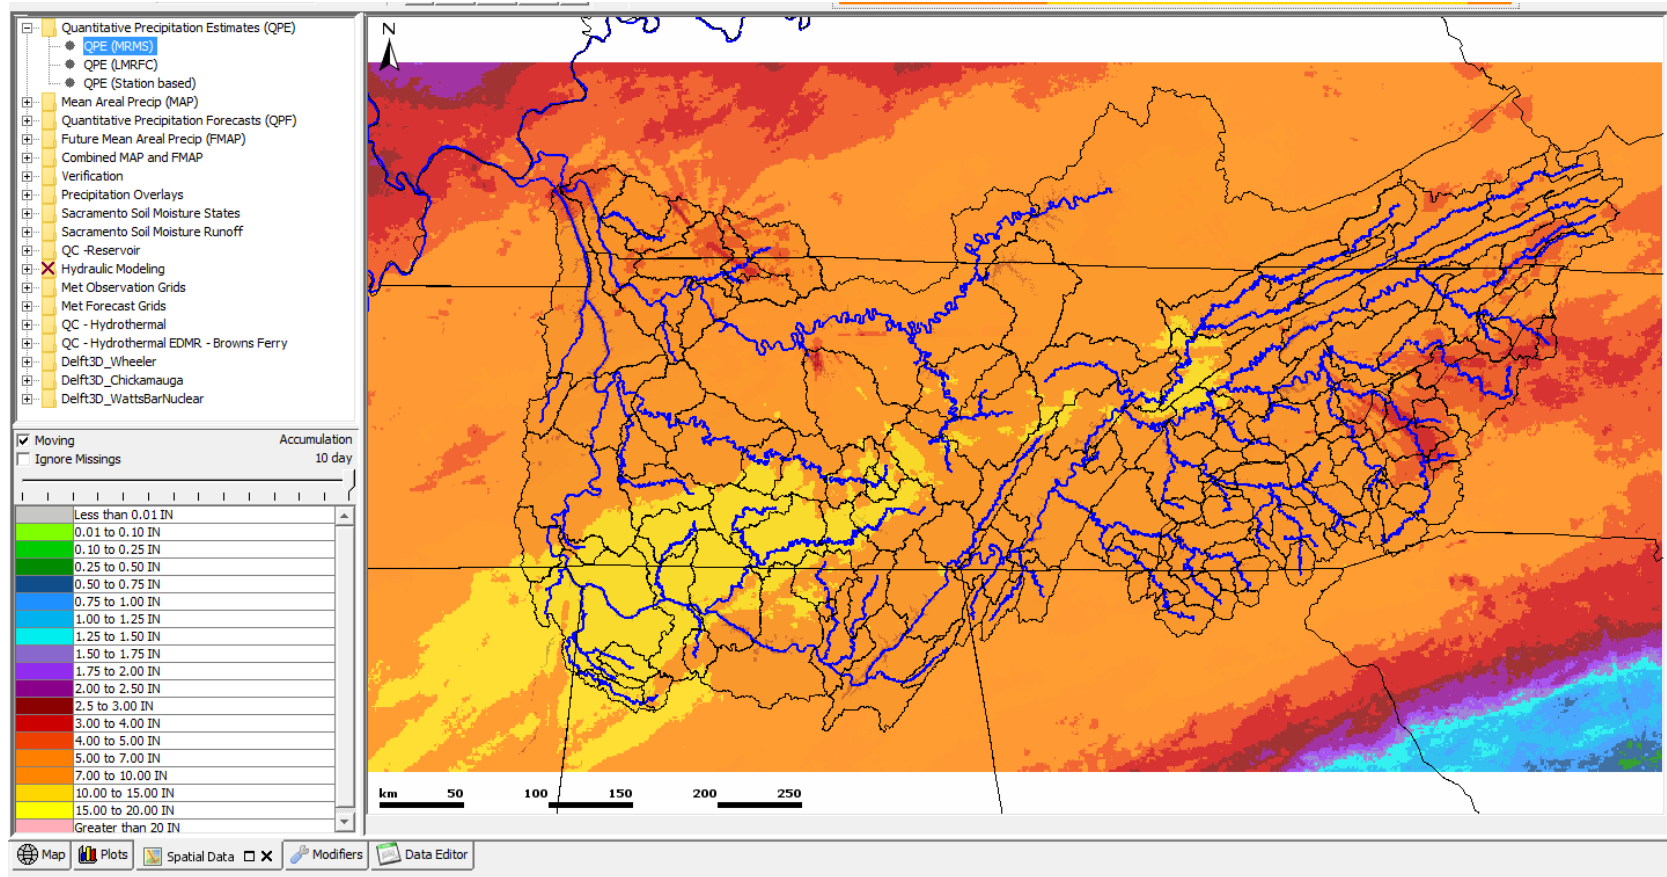

Water Quality

# February 2019 Flood

# Rainfall Accumulation (10-day)

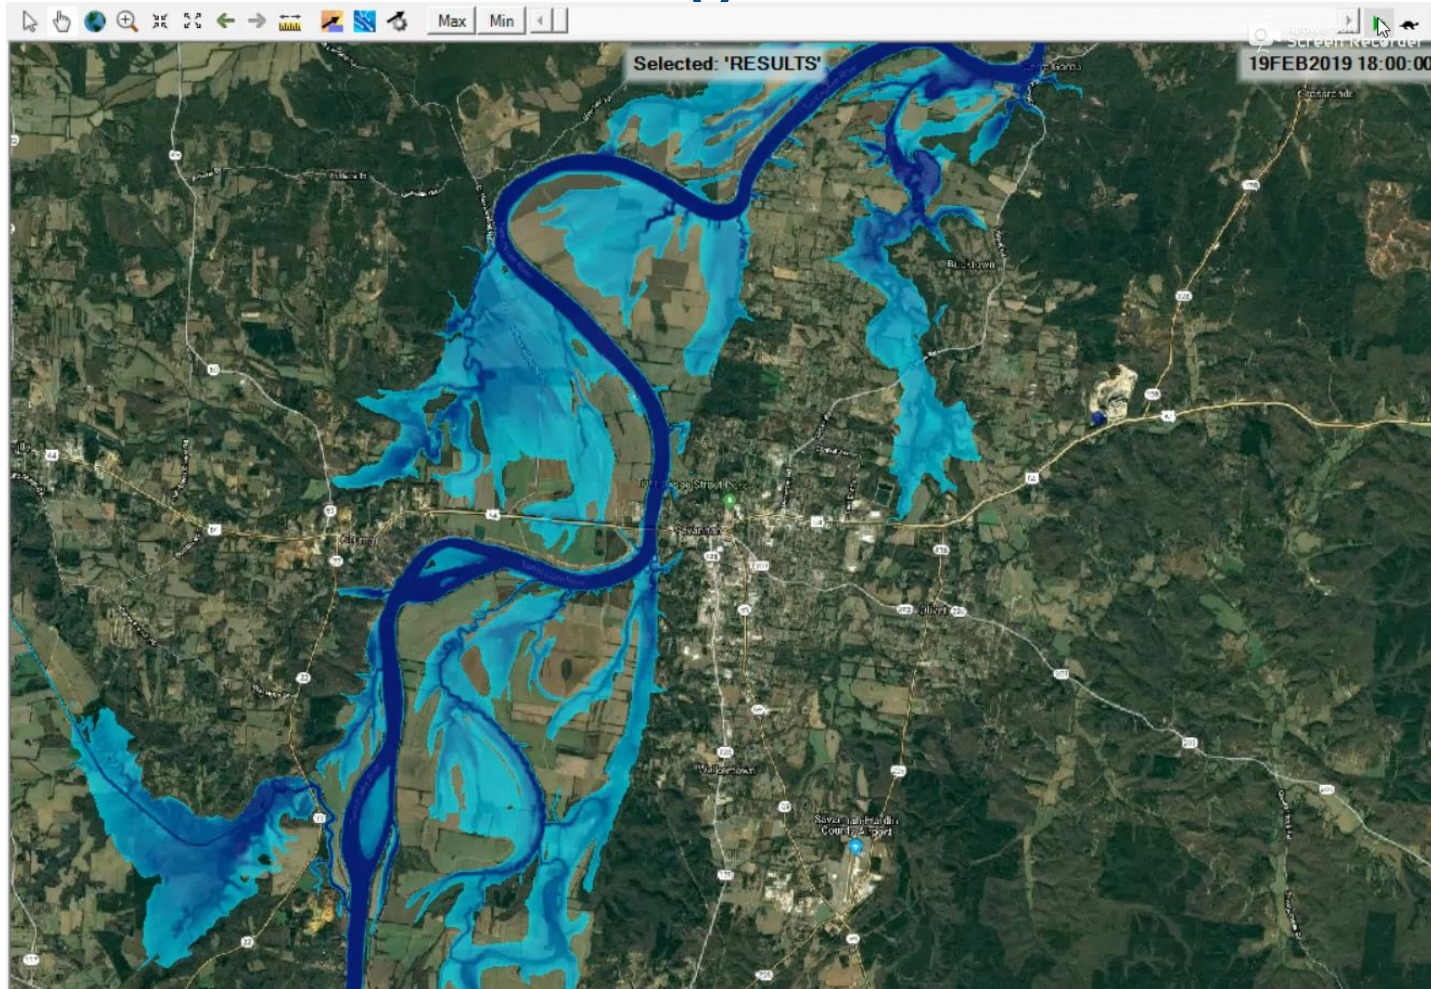

# System Rainfall-runoff

System

# Savannah Flooding

# Storm Stats

- 1.6 Billion in Flood Damages Averted
- 206,000 Unique App Screen Views
- 50,000 Unique views to LakeInfo Website
- 33,000 Calls to LakeLine
- Records accumulation records:
  - Feb 2019
  - 2018
- 530,000 CFS out of Pickwick (second highest)
- Great collaboration with LMRFC

# River Forecasting History

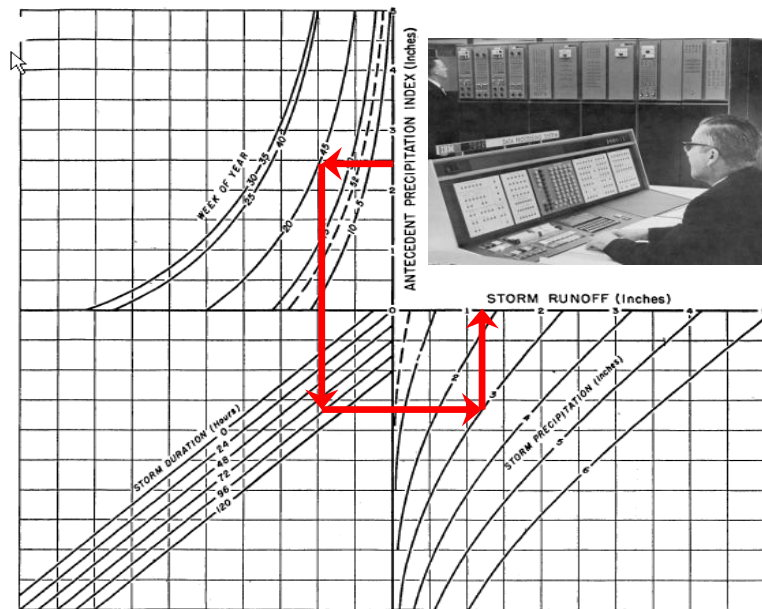

- From 1933 to 1976 all routing computations were performed by hand.
- Inflows were forecasted based on rain observed by volunteers who phoned in daily readings

The Engineers Slide Rule is made of good boxwood with Ivory slip, it is 10 inch long,  $\frac{7}{8}$  inch wide.

One of its edges is divided with inches, subdivided to 10<sup>th</sup>, the other edge is divided to Millimeter. The Face of the rule and ivory slide have the line of numbers by which calculations are made instantly and with accuracy. On the reverse side are tables of Gauge points for Square, Cylinder and Globe, also a table of Gauge points for Pumping Engines, and an other for regular Polygons.

A Book with explanation of Lines and Numbers is furnished with each Rule.

# System History

Year	Hardware	Database	Modeling Techniques
1933-1975	Slide-Rule	Paper	Hand Calculations via Slide Rules
1975	IBM/CDC Mainframe	Flat Files/Tapes	Hand Calculations via Slide Rules Simulated Open Channel Hydraulics (SOCH) MacCormack Scheme
1980	HP Mini Computers		INFLOW Model Stochastic-Dynamic Programming (STODP) Kent Model
1985	PC's	ALLBASE	HydroSim (Weekly Scheduling Model V2)
1990	HP UNIX Computers	Oracle	
1995			Riverware (primitive)
2000	Solaris/Windows Computers		Hydrothermal Models (ADYN-RQUAL, BFSCH, etc..)
2005		SQL Server	
2010			HEC-RAS Sacramento Soil Moisture Accounting Model Riverware optimization techniques
2017			Delft-FEWS system

# TVA FEWS System

- Three year project
  - Converted in-house forecast system to standard models and FEWS system
  - Migration from 100+ programs to one unified platform
  - Vastly improved data visualization and reports
- Went live Feb 7<sup>th</sup> 2017

### DAILY HYDRO REPORT

Tuesday, February 26, 2019

Generated: 2/26/2019 12:34 PM Central

SHH: 2/6-3/3. Daily TGS oil check/cleanup. No generation 1200-1400.  
 BOR: UFN. Spread generation and limit ramping to stabilize TW.  
 BOR: 1/7-3/30. Fluctuating pool for baseline data collection.  
 FPS: 2/26-27. Unit Testing. Min of 1 unit from 0700-1800 each day.  
 OIR: UFN. Unit 5 creep. Run 1 unit minimum.  
 GFH: thru 4/30. Unit restrictions for HW below 787.5'.  
 GFH: UFN. Minimize spill below 794.0' to avoid logs stuck in gates.

WBH: UFN. Run 1 unit for 1 hour after 4 consecutive hours of zero flow.  
 WBH/CHH: UFN. SON. Min 8K past plant, steady if daily Q is less than 10.5K.  
 GUR/WEH: UFN. BFN Min 13K hourly, min 13K daily, steady past BFN if Q<15K.

#### EXPECTED GATE CHANGES

Today: FPH, NCH, NGR, OSH, OIH, GFH, FLH, NJH, WEH, WLH, KYH  
 Tomorrow: WTH, BOH, FPH, CRH, DGH, FNH, NCH, NGR, CTH, AFH, OSH, OIH, GFH, CHH, NJH, WEH, WLH, PKH, KYH

If you have any questions concerning the daily hydro report, please call River Operations at 865-682-6065.

## Welcome to the RiverWiki

The RiverWiki is a tool to help you do your job better and more easily. How many times have you thought, "now where did I put that info on the sluice elevation at N Please use this wiki as a place to store our collective knowledge of our river system, and how to run it. The tools for collecting and organizing information are so easy to use that you can note much faster. You don't even need permissions to use this tool, because it is yours. To edit a page simply login (upper right hand corner) and then click on the 'Edit' link.

If you encounter any bugs or issues in FEWS, please enter them into our tracking system [IT Backlog](#).

### FEWS Information

# What's the next innovation?

Dilbert.com DilbertCartoonist@gmail.com

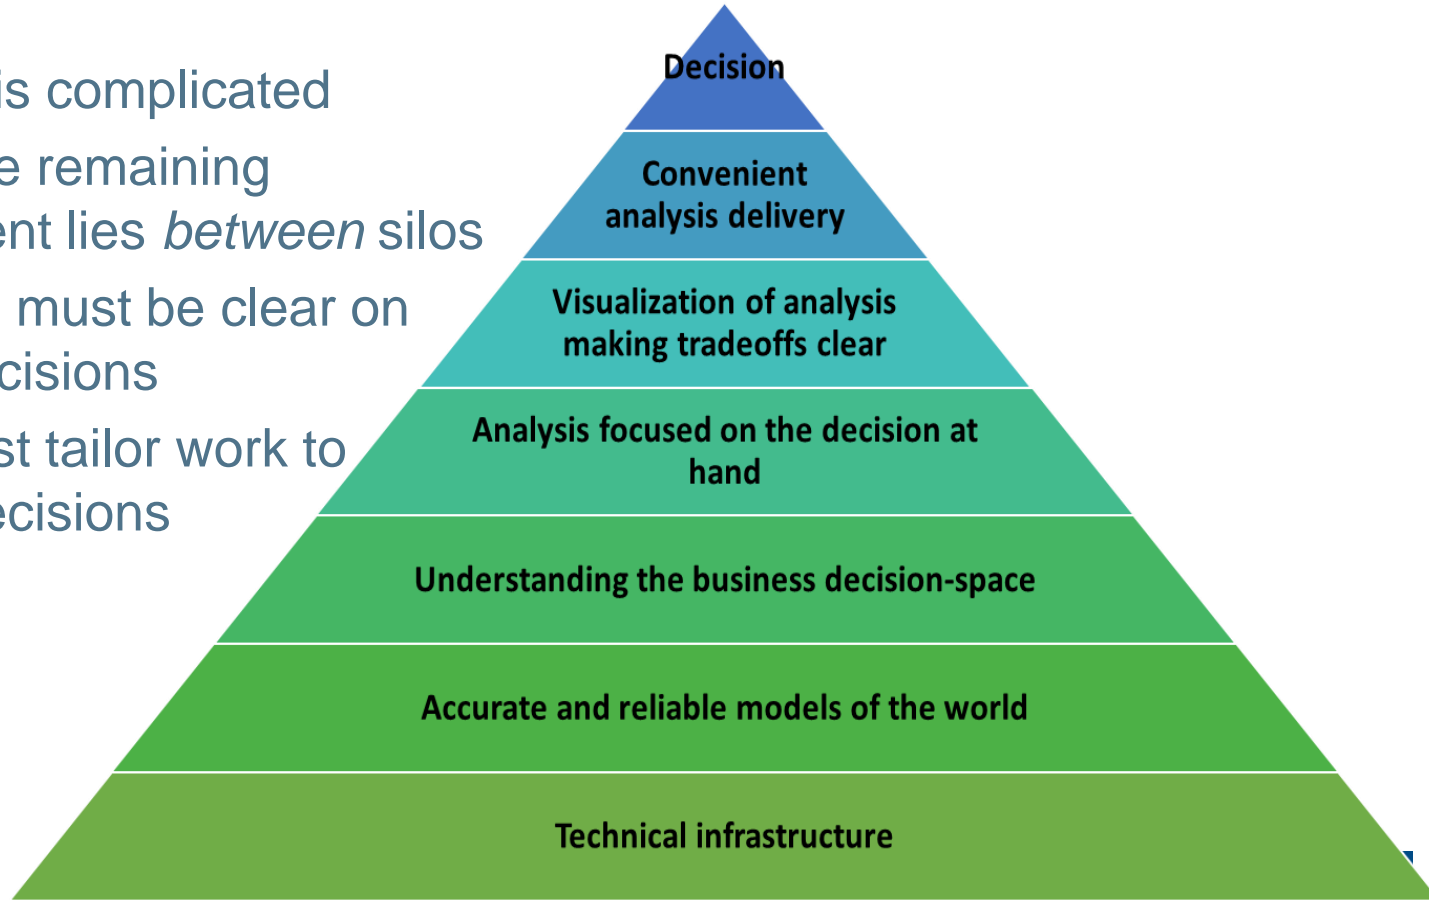

1-3-13 ©2013 Scott Adams, Inc. /Dist. by Universal Uclick

# Better Decisions

- The world is complicated
- Much of the remaining improvement lies *between* silos
- Executives must be clear on framing decisions
- Teams must tailor work to improve decisions

# Validate Decisions (Forecast Verification)

# Ongoing/Upcoming Projects

- Reservoir optimization improvements
- Probabilistic Flood Hazards Analysis
  - Paleo hydrology study
- Real-time floodplain inundation mapping
- Water Supply Reliability
  - Dendrochronology study
- Better integration of hydro with our thermal units
- Lots of small improvement request
  - 140 Currently in JIRA tracking system

# Future Opportunities

- Data Assimilation
- Internal Mobile App/Thin Client (In FEWS?)
- Better external data feeds/improved app
- Ensemble Inflow Forecasts
- Machine learning
- Drought in the west
- Aging infrastructure – Dam Safety
