

Dam operations workshop #2

Operating dams using Delft-FEWS (model independent)

Dam operations: Workshop 2

Operating dams using Delft-FEWS (model independent)

Workshop aim:

- 1. Fact finding:** What are the efficient ways to view and interact with proposed gate settings?
- 2. Understanding the Delft-FEWS dam operator community:**
 - How do you trust an optimised solution (black box)?
 - How do users of Delft-FEWS interact with reservoir models?
 - What displays are most useful
 - How are operating constraints presented to the user
 - What works – what doesn't work
