BHP RTFS:

Permit
Environmental authority EPML00561913
Daunia Mine

Agency interest: Water	
Condition number	Condition
W1	Contaminant release Contaminants that will, or have the potential to cause environmental harm must not be released directly or indirectly to any waters as a result of the authorised mining activities, except as permitted under the conditions of this environmental authority.

Table W1 (Mine Affected Water Release Points, Sources and Receiving Waters)

Release point (RP)	Easting (GDA94)	Northing (GDA94)	Mine affected water source and location	Monitoring point	Receiving waters
RP 1	631319	7561566	DAM 2 and integrated water system	End of outlet pipe or spillway	Isaac River via New Chum Creek

Table W2 (Mine Affected Water Release Limits)

Quality Characteristic	Release limits	Monitoring frequency
Electrical conductivity ($\mu\text{S}/\text{cm}$)	5000	Real time telemetry for EC and pH with grab samples at commencement and weekly thereafter when safe to do so and access permits Daily grab samples if telemetry not available (the first sample must be taken as soon as practicable)
pH (pH Unit)	6.5 – 9.0	
Sulphate (SO_4^{2-}) (mg/L)	1000	Commencement of release and weekly thereafter during release when safe to do so and access permits

Table W4 (Mine Affected Water Release During Flow Events)

Receiving water description	Release point	Gauging station description	Easting (GDA94)	Northing (GDA94)	Minimum flow in receiving water for release event	Flow recording frequency
Isaac River via New Chum Creek	RP 1	Isaac River Upstream (MP3)	627886	7556459	> or = $3\text{m}^3/\text{s}$	Daily

Table W5 (Receiving Waters Contaminant Trigger Levels)

Quality characteristic	Trigger level	Monitoring frequency
pH	6.5 – 8.5	Real time telemetry for EC and pH with grab samples at commencement and weekly thereafter when safe to do so and access permits. Limits only apply at MP4
Electrical Conductivity ($\mu\text{S}/\text{cm}$)	864 – cease release	
Sulphate (SO_4^{2-}) (mg/L)	1000	

Table W6 (Receiving Water Upstream Background Sites and Downstream Monitoring Points)

Monitoring points	Receiving waters location description	Easting (GDA94)	Northing (GDA94)
Upstream background monitoring points			
Monitoring Point 1	New Chum Creek – on the lease boundary with Millennium Mine	631782	7561830
Monitoring Point 3	Isaac River – upstream of the confluence of New Chum Creek and Isaac River	627772	7556279
Downstream monitoring points			
Monitoring Point 4	Isaac River – downstream of confluence with New Chum Creek	631731	7553518

BHP RTFS: Users Experience – Water Planners

- Overall operation

- Online since November 2021
- Key period: December 2021 – January 2022
- What were the observations over the past wet season?
 - Release forecasted but no real opportunity i.e. release conditions not met or estimated release volume is incorrect
 - Forecast river / creek flows but no flows in the creek or not above threshold as predicted
 - Inaccurate rainfall forecast at specific locations
 - Wrong WQ predicted in forecast (caused false release opportunity)

End Users

BHP RTFS: Users Experience – How can we improve the performance?

Monitor it closely and record

- The system gets updated every 4~6 hours adjusting its forecast based on observation data,
- we can monitor it closely during rainfall / creek flow events and record the discrepancy between forecast and observation.

QA/QC on gauging and monitoring stations

- Improve the system feedback loop quality is a key to accuracy (This is still in progress) – fix rainfall gauges to avoid over / inaccurate interpolation; auto-sampling and monitoring to provide timely and more accurate feedback;

System Training

- Limited calibration data was used for the system development. It needs more time (one or two more wet season) to training its data and feedback loop – more system calibration will be needed based on more observations

BHP RTFS: Users Experience – Water Planners

- Welcome advice from operators of other systems:
 - To have or not to have an Archive?
 - How to assess the system performance?
 - Where to put the priority on development of the system?

BHP RTFS: lessons learnt

- Knowledge encapsulation and communication tool
- Data intensive system
- IT infrastructure and cybersecurity
- Dynamic System – keep models and data up to date!
- Other possible uses

BHP RTFS: Any questions?
