Outline

- What is the Bureau Service performance analysis and which metrics are evaluated?
- How do we use PAT to support analysis? And what's new since 2021?
- Benefits of PAT – bringing in a new era of performance analysis and continuous service improvements.

*PAT – Performance Analysis Tool

What is Bureau Flood Service Performance Analysis?

The performance analysis compares flood watches, warnings and forecasts against key targets that are defined for each product and forecast location around Australia.

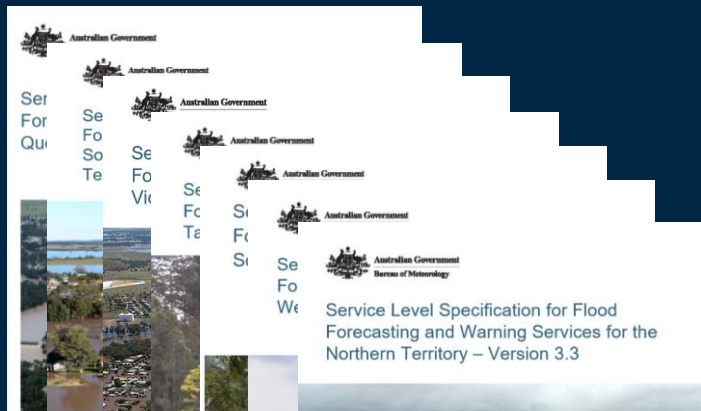

Why do we evaluate our service performance?

- To ensure we're always looking at how we can improve the flood warning service for the community!!
- Bi-monthly performance reporting to the Bureau executive team (internal)
- Annual Reporting (external)
- Flood Warning Consultive Committee (FWCC) meetings with emergency management partners (limited external)
- Annual or Special Climate and Water Statement (external)
- Flood event specific summaries (limited external, external)
- Ad hoc requests (internal, limited external)

What performance metrics are used for evaluation?

Bureau number	AWRC Number	Forecast location	Flood classification (m)			Prediction type	Target warning lead time		70% of peak forecasts within
			Minor	Moderate	Major		Time	Trigger height (m)	
403 – Ovens River Basin									
583148	403205	Bright	3.0	3.6	4.3	Qualitative	3 hrs	>3.0m	n/a
082112	403250	Eurobin (Ovens R)	4.5	5.5	6.0	Quantitative	3 hrs	>4.5m	+/- 0.3m
582014	403230	Rocky Point	3.2	4.4	5.2	Quantitative	6 hrs	>3.2m	+/- 0.3m
582004	403223	Docker Rd Bridge	3.7	3.95	4.1	Quantitative	6 hrs	>3.7m	+/- 0.3m
582002	403213	Greta South	2.8	4.2	6.0	Qualitative	3 hrs	>2.8m	n/a
582033	403200	Wangaratta (Ovens R)	11.9	12.4	12.7	Quantitative	9 hrs	>11.9m	+/- 0.3m

Timeliness: % flood watches and flood warnings issued to customers on time (before or at the stated next issue time) - target 97%

Lead time: % trigger height exceedances for which target lead time was provided to customers as per Service Level Specifications – target 70%

Accuracy: % peak predictions provided to customers within specified range (e.g. ± 0.3 m) as per Service Level Specifications – target 70%

Title: * Minor to Moderate Flood Warning for the Darling River

Sub-title: at Louth, Tilpa and Wilcannia

Summary Text:

MODERATE FLOODING OCCURRING AT LOUTH AND TILPA

The Darling River at Louth peaked near 10.18 metres on Friday [07/05/2021] with moderate flooding. River levels at Louth are easing with moderate flooding continuing.

The Darling River flood peak is currently arriving at Tilpa where moderate flooding is occurring.

Minor flooding is occurring along the Darling River at Wilcannia where a minor flood peak may occur late May.

The Darling River at Menindee Town is likely to remain below the minor flood level.

Sub-Catchment: Darling River downstream of Bourke to Tilpa

Included	Forecast Title	Forecast Level	Forecast Severity	Current Level	Current Severity	Clear
<input checked="" type="checkbox"/>	Darling River at Louth	10.20	Moderate	10.03	Moderate	<input type="checkbox"/>
<input checked="" type="checkbox"/>	Darling River at Tilpa	10.80	Moderate	10.63	Moderate	<input type="checkbox"/>

Sub-catchment Severity: **Moderate** ☐ Overridden

☐ Use Generated Text: Moderate flooding is occurring along the Darling River downstream of Bourke to Tilpa.

Warning Text *
Moderate flooding is occurring along the Darling River at Louth and Tilpa.

Level: Value m (Moderate)

Time: Part Day EST Overnight

Type: Peak

Likelihood: Medium

☐ Use Generated Text: The Darling River at Louth is likely to peak near 10.20 metres overnight Monday into Tuesday.

Prediction Text:

River levels at Louth are likely to fall below the moderate flood level Monday night into Tuesday.

Priority: Normal SEWS

Next Issue: 10/05/21 14:00 Mon EST Hours from now

Australian Government Bureau of Meteorology, New South Wales
Minor to Moderate Flood Warning for the Darling at Louth, Tilpa and Wilcannia
Issued at 12:44 pm EST on Monday 10 May 2021

Flood Warning Number: 36

MODERATE FLOODING OCCURRING AT LOUTH AND TILPA

The Darling River at Louth peaked near 10.18 metres on Friday [07/05/2021] with moderate flooding. River levels at Louth are easing with moderate flooding continuing.

The Darling River flood peak is currently arriving at Tilpa where moderate flooding is occurring.

Minor flooding is occurring along the Darling River at Wilcannia where a minor flood peak may occur late May.

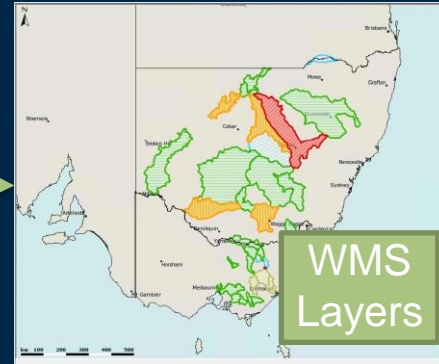

The Darling River at Menindee Town is likely to remain below the minor flood level.

Darling River downstream of Bourke to Tilpa:

Moderate flooding is occurring along the Darling River at Louth and Tilpa.

The Darling River at Louth is currently at 10.06 metres and falling, with moderate flooding. River levels at Louth are likely to fall below the moderate flood level Monday night into Tuesday.

The Darling River at Tilpa is currently at 10.63 metres and rising, with moderate flooding. River levels at Tilpa are likely to peak near 10.80 metres during Wednesday [12/05/2021] with moderate flooding.

Import to HyFS (FEWS)

FEWS User days 2021 – Next steps

FEWS User days 2021 (presented by Wen Wang) identified a number of further improvements:

- Automate the process as much as possible
- Improve algorithms, including peak selection
- Improve PAT display functionality for linking warnings with predictions for individual locations
- Better visualisation and filters from Forecast Tree
- Create peak height correlations with the peak identified in PAT
- Investigate metrics for flood watch products

Performance Analysis Tool (PAT) – Warnings import to FEWS

IDN36609
 Australian Government Bureau of Meteorology
 Initial Minor to Major Flood Warning for the Hawkesbury and Nepean Rivers
 at Menangle, Camden, Wallacia, Penrith, North Richmond, Windsor and Putty Road
 Issued at 3:47 pm EST on Saturday 2 July 2022
 Flood Warning Number: 1

MINOR TO MAJOR FLOODING LIKELY ALONG THE HAWKESBURY, NEPEAN AND COLO RIVERS
 MAJOR FLOODING POSSIBLE AT MENANGLE AND NORTH RICHMOND FROM SUNDAY

A surface trough and a developing East Coast Low has been producing heavy rainfall over the Hawkesbury Nepean Valley since Saturday morning with heavy rainfall forecast to continue through Saturday evening into Sunday and Monday. This rain coupled with high dam levels has the potential to produce riverine flooding along the Nepean river from Saturday evening at Menangle, and the Hawkesbury and Colo Rivers from Sunday.

River level rises have been observed along the Upper Nepean and Mollondilly rivers and are expected to rise further with forecast rain.

A Severe Weather Warning for heavy rainfall is current for the Metropolitan, Illawarra and parts of Hunter and Central Tablelands Forecast Districts.

A Flood Watch is current for the Hawkesbury and Nepean, Upper Cox's, Colo and Macdonald Rivers.

Upper Nepean River:
 Minor to Major Flooding may occur along the Upper Nepean River.

The Nepean River at Menangle Bridge is likely to exceed the minor flood level (5.20 m) around 09:00 pm Saturday. The river level may exceed the moderate flood level (9.20 m) Sunday morning and may reach around 11.00 metres during Sunday, with moderate flooding. Further rises to the major flood level are possible, with forecast rainfall

The Nepean River at Camden Weir may reach the minor flood level (6.80 m) during Sunday. Further rises to the moderate flood level are possible, with forecast rainfall.

The Nepean River at Wallacia Weir may reach the minor flood level (5.00 m) late Sunday. Further rises to the moderate flood level are possible, with forecast rainfall.

Hawkesbury and Lower Nepean River:
 Minor to Major flooding may occur along the Lower Nepean and Hawkesbury River.

The Nepean River at Penrith may reach the minor flood level (3.90 m) Sunday evening. Further rises possible with forecast rainfall.

Start Time: Wed 01-06-2022 00:00:00

End Time: Sat 16-07-2022 00:00:00

Improved algorithms for peak selection

Peak selection algorithm includes:

- Peak forecast trigger height
- Minimum prominence
- Configurable for each location

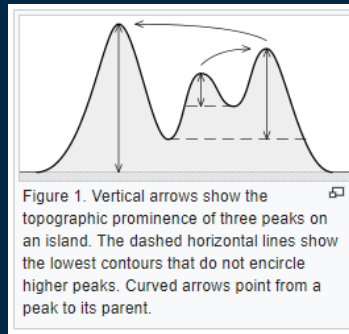

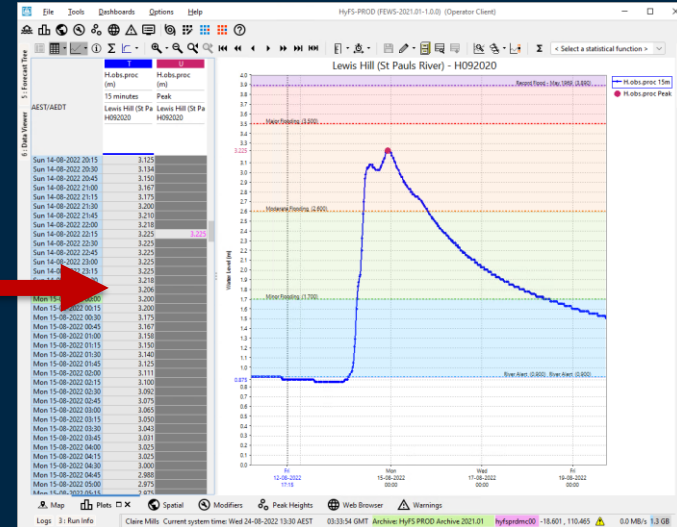

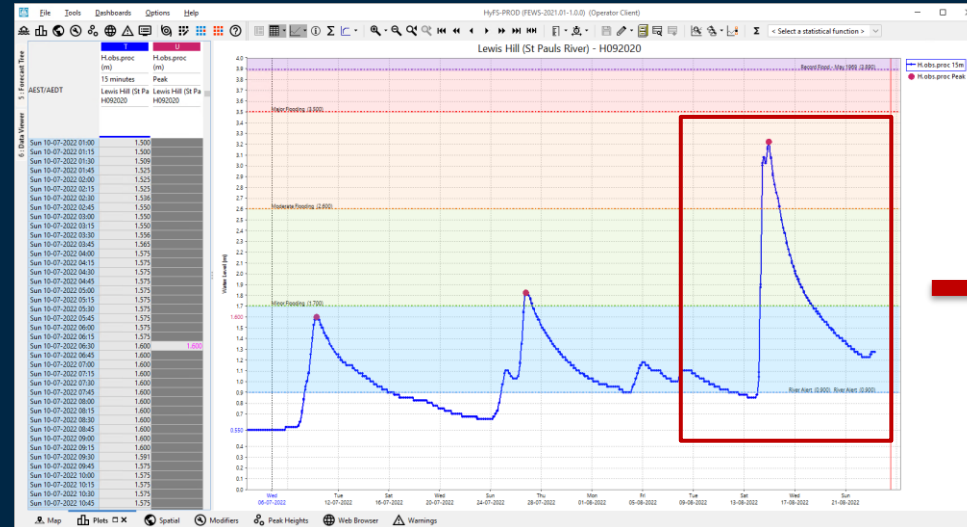

Figure 1. Vertical arrows show the topographic prominence of three peaks on an island. The dashed horizontal lines show the lowest contours that do not encircle higher peaks. Curved arrows point from a peak to its parent.

False peaks still occur!
During the QAQC stage, peaks can be removed via the plot window in edit mode

Back to the future: Performance Analysis Tool

Monthly performance statistics from start of QAQC to final export of results is now taking one person between **2-4 days**.

More time to:

- Focus on analysis for improving the service
- Identifying issues around process in the flood warning centres
- Determining priority locations / catchments for improvements
- Running internal performance results workshops and training (NEW!)

Close to near time analysis:

- Ability to meet internal and external reporting requirements DURING or shortly after major events.
- Performance analysis available for input into post event debriefs (PERM) and internal performance results workshops and training

Next steps for Performance Analysis Tool

- Minimise the QAQC requirements
- Further improvements to visualisation to the performance analysis data
- Progress using the peak selection and export to automate development of peak height correlations
- Investigate the use of the tool and algorithms for analysis of model performance
- Investigate metrics for flood watch products
